SafeVoyage To Secure World Travel and Tourism

The problem

For people travelling around the world, safety issues are a big concern now.

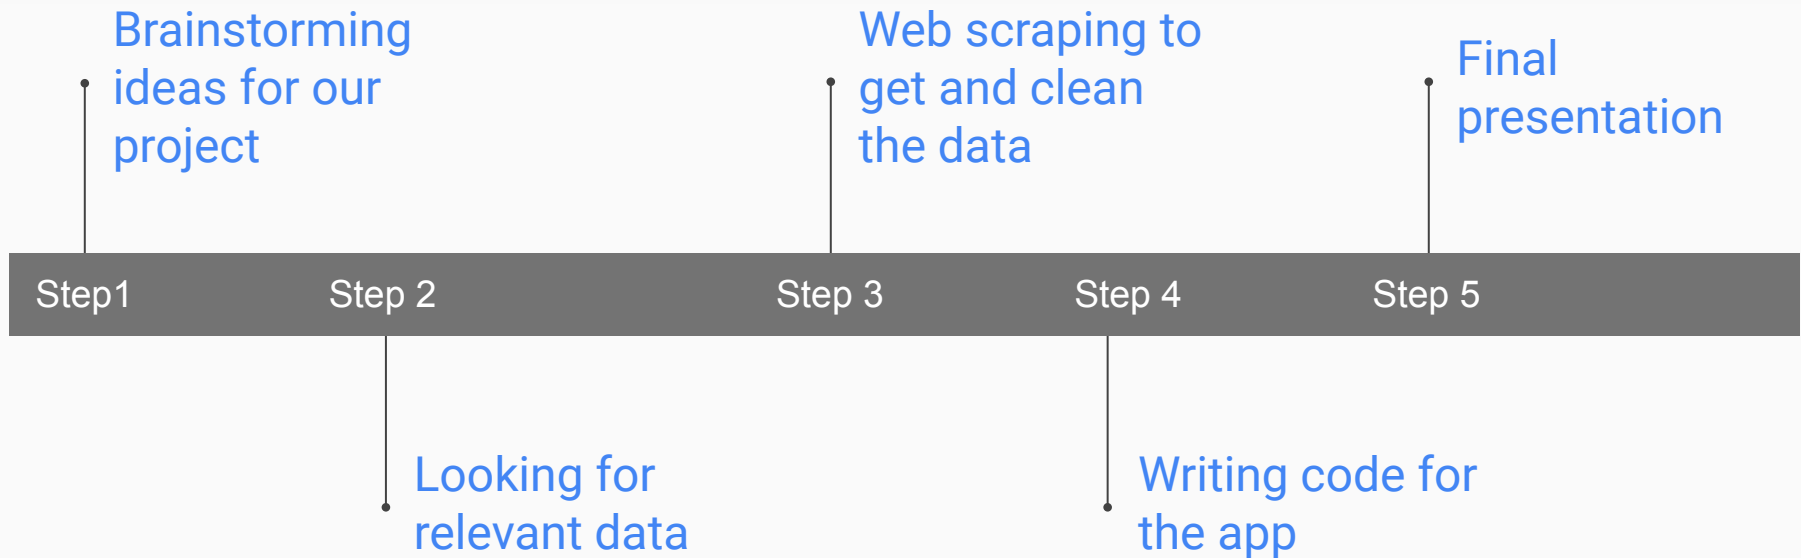

A close-up photograph of a person's hand pointing at a map on a table. The hand is in the foreground, with fingers extended towards the map. The map is partially visible, showing some lines and colors. The background is blurred, showing what appears to be a street scene with some lights and structures. The overall lighting is dim, suggesting an indoor setting at night or in low light.

The solution

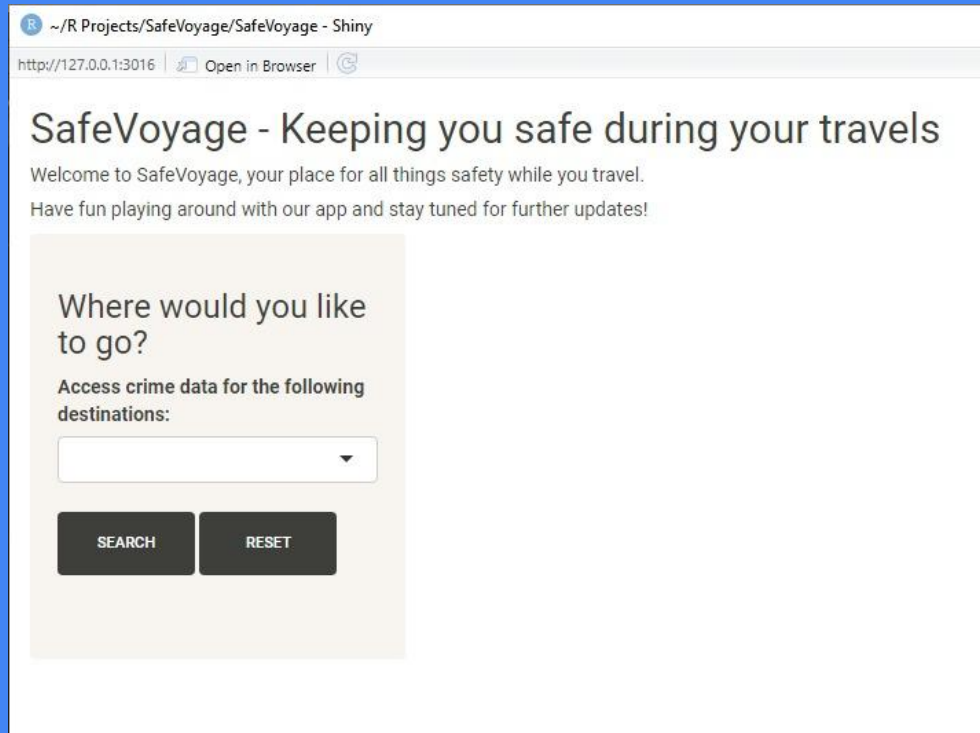

Create a map-based app to direct travellers towards safer areas and promote tourism.

Milestones

How we tackled the problem

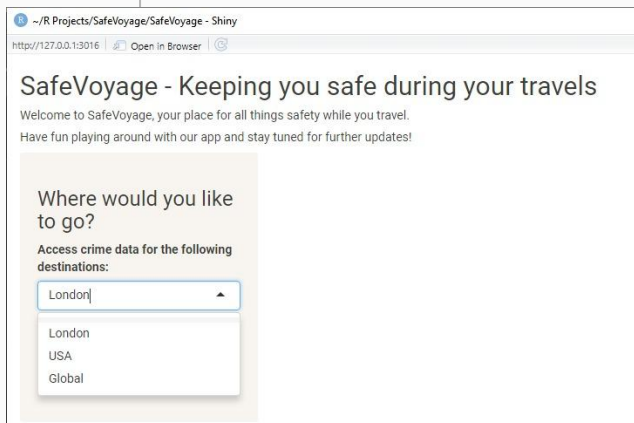

Our final application: SafeVoyage

How it works

Step 1

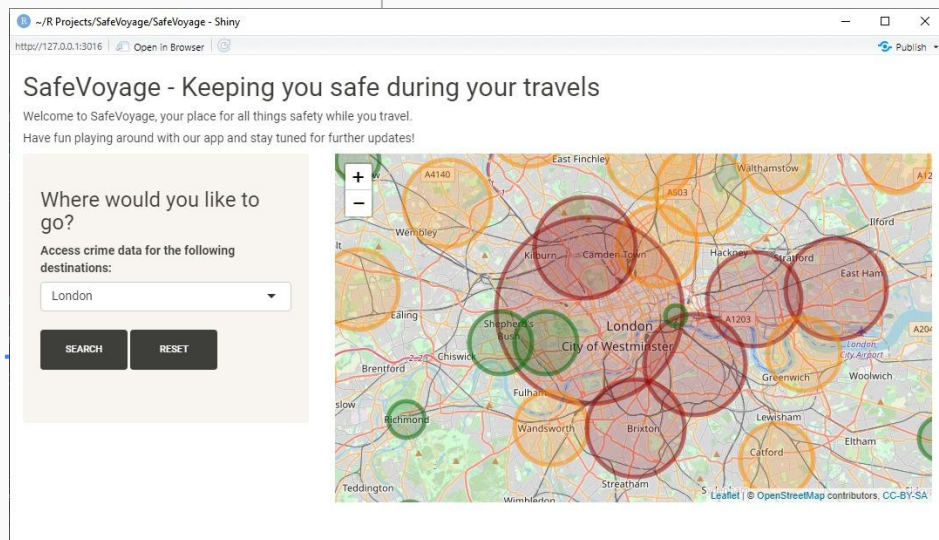

The screenshot shows a web browser window with the title "SafeVoyage - Keeping you safe during your travels". Below the title is a welcome message. The main form has a heading "Where would you like to go?" and a sub-heading "Access crime data for the following destinations:". A dropdown menu is open, showing "London" as the selected option, with other options "USA" and "Global" visible below it.

Step 2

Step 3

Thank You!

Special thanks to Stephane, Yuming and Lionel for their guidance.
